

## Easy answer to oral motor stimulation

Improves oral sensation for adults and children

- Improves oral motor strength and control
- Increases safety and independence with feeding and swallowing
- Stays cold throughout an entire therapy session

### Ice Finger

Stays cold throughout an entire therapy session, helping to improve oral motor and oropharyngeal strength and sensation for adult and pediatric clients with feeding and swallowing impairments. The totally sealed, malleable gel core is frozen for thermal stimulation and can be refrozen so one **Ice Finger** can be used per client for the entire duration of therapy. For additional stimulation, it can be dipped into sour substances. The small grip at the top makes it easy to evoke mouth opening, insert for sucking, or overcome a hypersensitive gag reflex. Easy to use with clients who resist intraoral stimulation or have difficulty following one-step commands.

Each **Ice Finger** is 4"L below the handle and 5/8" in diameter.

### Ordering Information

#81868 Ice Finger, 5/pk
