

## Optimal support for A-line insertions

*AliStrap® armboard strap sold separately, see reverse*

### A consistent, reliable alternative to improvised methods

#### The problem...

- Makeshift towel rolls
- Abrasive tapes
- Unsecure, unreliable

#### The solution!

- Contoured design for easy insertion
- Skin-safe, padded straps
- Secure, safe positioning

- Helps prevent line kinking, decreasing false alarms
- Reduces interference with A-line waveform
- Saves time creating unsafe, makeshift supports

#### A-Line Support Splint

Preparing a patient for A-line insertions requires practice and experience to get the best results. Poor A-line placements due to improvised methods can lead to lost time, patient discomfort, and increased false alarms.

Made of closed-cell foam, **AliMed's A-Line Support Splint** delivers consistent and reliable access to the radial artery by positioning the wrist just right—every time. The contoured shape allows skin to be stretched taut with artery presented optimally and thumb abducted—all of which facilitate cannulation.

Available in an economical **Standard** model for use with your own straps or **Deluxe** model with skin-friendly, padded straps.

**To order, see reverse.**
