Setting A New Standard In Patient Positioning

TRENDELENBURG STABILIZER

SECURE
ROCK SOLID, NO SLIDING

QUICK
CONSISTENT SETUP

COMPLETE
ALL-IN-ONE SOLUTION!

Details, p. 2
Problem
Trendelenburg positioning often presents a high risk of patient shifting and sliding. Most professionals use a complex assortment of straps, foam, gel, tape, belts, and beanbags to secure their patient during procedures done in this position. A makeshift approach like this is often unsafe, unreliable, and does not prevent the patient from slipping or sliding during the procedure.

The difficulty occurs when straps are mounted in a compromised position because they are not specifically engineered to anchor at the precise point and angle that is required in Trendelenburg.

These challenges and one nurse’s determination to keep her patients safe and comfortable is what gave Tamra West, RNFA CNOR and Robotic Team First Assistant, the drive to design the new AliMed® Trendelenburg Stabilizer.

Solution
The all-in-one Trendelenburg Stabilizer is a self-contained solution that provides ultimate stability for surgeons and exceptional safety for patients. The Stabilizer uses a draw sheet as a nonslip foundation, securely anchored to the table base and rails with integrated straps to prevent any draw-sheet sliding. The kit also uses strategically angled straps at the chest and shoulders that work together to securely hold patients and prevent them from slipping and sliding.

Additional straps wrap and hold patients’ arms in a neutral anatomical position, while convoluted foam padding distributes pressure evenly and protects skin from injury.

The unique combination of the draw sheet, integrated straps, and foam takes the frustration and danger out of Trendelenburg positioning.

Tested safe for use with patients up to 400 pounds and with straps long enough to secure around toboggan arm guards, the complete AliMed Trendelenburg Stabilizer is the one-size-fits-all answer to inverted or extreme positioning.

“The nurses say this now gives them uniform protocol when it comes to positioning patients on the O.R. Table and is especially helpful when they are dealing with larger patients.”

—Tamra West, RNFA CNOR

Slip-resistant Draw Sheet with Integrated Straps
- Secures arms
- Anchors stabilizer to table base
- Harnesses chest and shoulders to resist slipping/sliding

✓ Complete solution fits all patients up to 400 lbs.
✓ Disposable—reduce risk of infection and speed cleanup

**Trendelenburg Stabilizer** safely and securely positions patients of any size for all surgical procedures requiring supine, left or right tilt, lithotomy, or Trendelenburg positions, up to a 30° angle. This complete positioning system secures the patient to the O.R. table at the arms and chest, while gently padding to help prevent pressure buildup. The patient stays firmly in place and won’t slide down the table during the procedure. Positioning straps are long enough to securely wrap around the height and added width of toboggan arm guards. Best suited for the following procedures: Robotic, Gynecological, Urological, Colorectal, and Laparoscopic.

*Draw Sheet dimensions: 40” W x 60” L • 400-lb. capacity
• Materials: Polyester/rayon draw sheet • Polyester-blend straps • High-density, open-cell convoluted Polyfoam shoulder/arm/chest positioners • Single-use • Nonsterile

One size fits all patients up to 400 lbs.

- **#LH93 7125 STABILIZER** $149.00 ea
- **#LH93 7126 6/CS** $799.00 cs ($133.16 ea)

Oversized

- Patent pending.

**Stabilizer Components:** Draw Sheet with attached hook-and-loop straps, one pair of foam egg-crate Arm Pads, and one pair of foam egg-crate Chest Pads.

**Draw Sheet with integrated straps**
**Foam padding**

---

**For your larger patients...**

**Toboggan Arm Guards** Easily integrate these guards into your Trendelenburg protocol using the AliMed Trendelenburg Stabilizer (above); the straps are long enough for secure fastening around the Toboggan Arm Guards. Sold in pairs.

New shapes and sizes added!
Break down procedures in minutes!

**Convoluted Foam Protectors**
Open-cell, convoluted egg-crate foam cradles upper and lower extremities, protecting against pressure points and mechanical injury. Perfect for surgical procedures requiring full protection and especially effective for robotic procedures. Disposable for quick, easy cleanup and to help reduce cross-contamination risk.

- Protection against pressure sores and nerve damage
- Better cushioning than pillows or towels
- Even distribution of body weight
- Increased friction, reducing slippage
- Disposable protectors save valuable minutes in procedure breakdown
- Reduced cross-contamination risk—single-patient use
- Compressed to save storage space
- One size fits all

**Individual Components**
Create your own procedure kit

**All-in-one pressure management package**
Save time and money with the convenience of pre-packaged Convoluted Foam Protector Kits! Just grab the right kit and you’re ready with everything you need for setup! Choose from two convenient kits, Kit A or Kit B. 7 pieces/kit. Sold 6 kits/bx (42 total foam protectors).

**Kit A**
Each kit contains 1 Table Pad Overlay • 1 pair Ulnar Pads • 1 pair Hand Pads • 1 pair Heel Pads
Kit A features Heel Pads in place of lithotomy boot pads

in robotic procedures

Patient protection combined with physician support

- Keep arms/legs on the table
- Help prevent accidental dislodgment of IV and arterial lines
- Help shield ulnar nerve against excess pressure

Toboggan Arm/Leg Guards are easy-to-clean radiolucent shields made of Vivak®, a crystal-clear, extremely strong radiolucent material. They protect the patient's arms and legs during interventional procedures. Slide the toboggan under the pad and the patient's weight holds it in place. Contoured top offers stabilizing support for clinician's arms during procedures. Custom manufacturing is available upon request. Soft protection pads are available below. Three sizes to best accommodate your imaging device needs.

Small, 10"W x 6"H x 10¼"D: Great for upper body procedures; use when a shorter height or narrower width is required. Also offers a better fit for pediatric, adolescent, and small patients. Smaller size reduces interference with overhead cameras and other surgical equipment.

Medium (Standard), 15¾"W x 8"H x 10¼"D: Fits most average-sized patients' extremities. Available individually or in pairs.

Large, 15¾"W x 10¾"H x 10¼"D: Accommodates larger arms and legs.

Add a layer of safety to your toboggan

Convoluted Polyfoam Liners. One size fits all toboggan sizes. Single-patient-use liners offer protection without the risk of cross-contamination. Can cut to size. 12 pr/cs.

8"W x 20"L x 2" thick

AliStrap™ hook-and-loop strapping

AliStrap™ is a continuous roll of hook-and-loop strapping that cuts to any length you need. Simply wrap around any body part or object and press ends together to form a tight, secure bond.

No sticky residue! AliStrap is one side hook, the other side loop, all in one strap—there is no need for adhesives or separate opposing components to form a bond. Hassle-free, without risk of bacteria-trapping residue left on patients' skin or on expensive robotic equipment, table pads, and positioners.

Skin-friendly! Other straps have stiff, sharp-feeling edges that, when wrapped around soft tissue, can cut into and abrade skin. AliStrap is soft and gentle on the skin, with a loop span that extends beyond the hook area, allowing the edges to yield and flex against soft tissue, drastically reducing subcutaneous shear forces against skin of sensitive patients.

The right hook

So-called “standard hook” is very abrasive and not ideal or recommended for applications that require contact with skin. AliStrap, however, uses medical-grade hook, which has a lower profile and a smoother feel than standard hook.

Fragile skin

Where fragile skin is a concern, the strap of choice is AliStrap™ Soft. This even-softer version of AliStrap uses an internally padded loop, rather than the conventional woven loop. The padded loop has a softer surface with a built-in internal foam layer between the hook and loop. Most users rely on the original AliStrap for standard use and defer to AliStrap Soft for special cases involving particularly fragile skin.

Padding adds comfort against skin
VeriClean™ O.R. Table Straps

Fully welded seams, free of stitching and punctures—won’t trap bacteria, and they allow complete submersion and high-level disinfection. Choice of Amisco®-Style or Single Strap.

Both: Thermoplastic urethane belt • Metal buckles • Latex-free • 3-year warranty • Amisco®-style: Mid-panel measures 5"W x 18"L

Buy a Pair! Save 15%!
Eliminate the hassle, save time and money! Order TWO VeriClean straps and rotate usage. Keep ONE available; send ONE to Central Processing for cleaning!

VeriClean™ O.R. Table Straps

See how VeriClean™ compares!

Log Reduction of microorganisms*  
Traditional Amisco®-Style Straps  
VeriClean™ O.R. Table Strap  

*Log Reduction at 10^6 is the measure of live microbes that have been eliminated from a surface during disinfection.

In an independent lab study, the VeriClean™ O.R. Table Straps exceeded the FDA-recommended endpoint used to define high-level disinfection.

Fully submersible

Problem
Most rubber laminate O.R. straps are stitched together, presenting punctures, perforations, and thread fibers that create a breeding ground for bacteria. Although it is easy to disinfect the impervious, waterproof surface, it is nearly impossible to disinfect those buried and hidden in stitched areas without compromising the structural integrity of the strap.

Solution
Now comes the first O.R. Table strap that is ultrasonically welded! No thread. No puncture holes. No open seams. Completely submersible—eveny conceivable surface can be disinfected. The new VeriClean™ O.R. Table Straps leave nowhere for bacteria to hide.

VeriClean™ straps have NO STITCHING!

Compact soil pocket

Conventional straps have STITCHING that traps bacteria

Gel protection for shear reduction

AliGel™ Surgical Table Straps
Cushion the patient with gel protection. One-piece urethane strap attaches to the surgical table side rails and secures back on itself with hook-and-loop closures. Gel mid-panel provides soft contact with patient.

56"L • Compression panel: 4½"W x 38"L x ¾” thick

#LHH93 1332 $204.00 ea

Metal-free with compression pad

Nonmetal O.R. Table Straps
Eliminate protruding buckles. Secure around patient with hook-and-loop closures. Adjust to fit all surgical tables with side rails. Compression pads are ideal for reducing imaging artifacts on gas-distended patients.

Both models: Heavy-duty conductive vinyl
Standard: 70"L • Compression panel is 5"W x 18"L
Bariatric: 120"L • Compression panel is 10"W x 24"L

#LHH95-577 STANDARD $140.00 ea
#LHH92 5470 BARIATRIC $175.00 ea

Narrow, metal-free strap

Black Conductive Positioning Straps
One-piece black conductive vinyl straps thread around side rails with strong hook-and-loop closures. Metal-free

#LHH95-080 3"W x 75"L $111.00 ea
#LHH95-081 5"W x 75"L $127.75 ea

www.AliMed.com FAX 800.437.2966 CALL 888.625.4633
Universal Table Straps

- Soft against patient’s skin
- Versatile—hook adheres to either side of strap
- High-strength closure
- Economical and reusable

Fits even your largest patients!

Universal Table Straps are extraordinarily strong and can accommodate just about any patient. The entire strap length is soft loop, so the hook can securely close on any area on either side. Shorten the strap to accommodate the smaller patient by cinching up the side rail ends of the One- or Two-Piece Side Rail Straps or by overlapping the One-Piece Circumferential Strap (see below).

Loosen the cinch or overlap for the larger patient. To permanently shorten one-piece strap, simply scissor-trim the blue loop to the appropriate length.

Simplest One-Piece, Encircles Patient and Table

Strongest One-Piece, Loop through Side Rail

Easy rapid chest access Two-Piece, Loop through Side Rail

Bean bag positioners

Better stabilization, proper positioning

Everyone knows that cushy bean bag feel—the way the Styrofoam beans freely flow within the bag and mold around any shape.

**AliMed® Positioning Bean Bags** are much the same, but are made with small, loosely packed Styrofoam beads within a tough-yet-flexible urethane bag with vacuum suction valve.

Before applying the vacuum, the flexible bag and filling can be shaped around the body, perfectly sculpted to the patient’s anatomy. When the vacuum is applied, it becomes a solid foundational support, allowing the patient to be “locked” in the right position.

Simply unscrew the valve to let air in, and the beans can freely move again.

The featherweight Styrofoam beads make for a lightweight bean bag that is easily carried and manipulated by anyone.

AliMed's urethane enclosure material works together with the beads for the right flexibility, precise shaping, and maximum conformity. Radiofrequency-welded seams ensure the highest integrity for maximum bead containment. Stain-resistent, easy to clean, and nonporous.

For additional shear protection on our three beanbags with cutouts, an optional layer of Blue Diamond® Gel is available.

Available in two styles: **Bean Bags with Cutout** offer a space for extremities to lay in a more natural position.

Universal Bean Bags can be used in a variety of ways for quick and easy positioning.

AliLite™ Gel is the best choice for lightweight pressure relief, with positioners 50%-75% lighter than standard gel. Silicone-based gel is wrapped around foam to conform to the patient’s shape, offering excellent weight distribution and helping reduce nerve damage potential and skin breakdown.

Latex-free, radiolucent, fire-resistant, and guaranteed for two years.

### AliLite™ Gel Positioners

- **50-75% lighter than other gels**
- Offers same pressure mapping as gel alone
- Nonslip base

**AliGel Positioners**

**AliGel Donuts** stabilize and protect patient's head while allowing easy access to surgical sites of head and neck.

**Horseshoes**
- Clinically proven
- Extremely durable
- 40+ year history of O.R. use

AliGel™ is made of Akton® polymer, which has been the gold standard for O.R. positioning for 40+ years. Unique physical properties allow AliGel to maintain its shape, stretch, and shock absorbency, making it ideal for prevention of decubitus ulcers. Offers added patient comfort and protection.

**Supine Head Pad**
- May be used for most supine positions.
- After patient's head is placed in the pad, centering dish conforms to patient's head for support and pressure prevention.
- Comes wrapped in a nonremovable fluid-proof cover.

**Heel Cups**
- Offer protection against pressure on the heel without a hook-and-loop attachment.
- A slit in back of the cup secures the patient's Achilles tendon area.

**Armboard Pads**
- Protect biceps, elbow, and forearm areas. Can be used alone or to enhance foam armboard pad.

**Flat-Bottom Chest Rolls**
- Protect entire chest area from pressure while in prone position. Also used for relieving pressure under neck, knees, and ankles. Flat bottom helps keep roll in place.

---

**Heel Protector Wraps**
- Secure with hook-and-loop attachment. One size fits left or right.
- 1/8” thick • 1.7 lbs.

---

**Prone Head Pad**
- Keeps head in a straight, neutral position during prone procedures.
- Patient's head and face are protected and allowed clear air passage and aid anesthesiologist while patient is in lateral and prone positions with head to side.

---

**Chest Rolls**
- Relieve pressure on chest, neck, knees, and ankles.

---

**Positioners**
- Neonatal
- Pediatric
- Adult

---

**Hygienic Donut Covers** Conventional cleaning would require a nurse to clean fluids from donut, and then disinfect. AliMed's Hygienic Donut Covers protect the donut from both fluids and residue for safer, more thorough cleanup. For all adult donut sizes. Not suitable for use with horseshoes or prone positioning. 100/pk.

Table Pads, Straps, Positioners, Sandbags, Toboggans, and more!
Protecta-Coat™ Positioners with antimicrobial

Easy to Clean

Antimicrobial
Protecta-Coat Positioners are permanently impregnated with antimicrobial ionic silver, which controls odor-causing bacteria on the product’s surface. This protection lasts for the life of the positioner.

What is antimicrobial ionic silver?
From ancient Egyptians to NASA scientists, mankind has been using naturally occurring silver to clean, purify, and disinfect. Now AliMed is harnessing patented technology to introduce silver into the healthcare environment. It uses naturally infused silver ions to inhibit the growth of odor-causing bacteria and germs on the product's surface.

Waterproof
Waterproof, nonslip coating retains the resilience and support that you normally expect with the best uncoated positioners. Save your department time and money with a positioner you can use over and over again!

Seamless
With absolutely no seams to trap bacteria, these positioners are easily disinfected with no surface left unclean.

Radiolucent
Great for radiology studies as Protecta-Coat withstands all the worst-case scenarios during X-rays: barium-induced diarrhea, Betadine, IV contrast, etc. These multipurpose positioners are even radiolucent on surfaces at 60 kVp or above.

Caution: Procedures at less than 60 kVp may produce slightly visible lines on edges of positioners. Always position the patient so that the edge of the block will not be in the image field of concern. When tested at low attenuation of 80 kVp, results indicate an aluminum equivalency of 1%.

New shapes! New sizes!

A. 35/55° Double-Angle Wedges
9½" W x 14" L x 6½" H
#LHH92 4954 $93.75 ea
