

Strengthens muscles of inhalation and exhalation

Now available in Pink!

5 exhale settings

6 inhale settings

- Improves breath support in speech and respiratory training

- Enhanced dual-resistance settings for inhalation and exhalation

The Breather

Respiratory muscles, like other muscles, can weaken from prolonged illness, aging, and neuromuscular diseases. The Breather is a Respiratory Muscle Training (RMT) device that is effective in rebuilding strength in both inspiratory and expiratory muscles of respiration.

The Breather trains diaphragmatic breathing to improve breath support for speech production, swallow safety, productive cough, and helps reduce dyspnea.

This unique, ergonomic handheld tool provides 11 independent settings to strengthen both inhalation and exhalation and it can be used with breathing or speaking valves.

1 1/8"W x 5 1/16"L x 1 7/8"H • Clean with soap and water
