Correct leg-length discrepancy

**Peel-apart layers for precise height adjustment—achieves up to ⅜” lift**

AliMed® Adjustable Heel Lifts Simply peel one or two layers at a time to adjust height precisely to your patient. Set to ⅜”, ¼”, or ⅛”. Durable leather cover with three resilient ⅛” rubber layers are tapered for comfort and firmly held together by peel-apart adhesive. Not made with natural rubber latex.

**Viscoelastic polymer absorbs shock—achieves up to ½” lift**

AliMed® Leg-Length Discrepancy Pads Long-lasting viscoelastic polymer gives exceptional shock absorption. Firm wedge with soft fabric top cover is moisture-resistant and won’t harden, crack, or curl. Choose from two heights: ¼” or ⅛”.

**Contoured heel and arch support—achieves ½” lift**

AliMed® Leg-Length Lifts feature a ½” lift to compensate for length discrepancies. Other lifts achieve only ¼” or ⅛” lift and don’t support the arch, putting dangerous pressure on metatarsal heads. These flexible, molded polyurethane lifts support by approximating normal plantar contours of hind and midfoot. Choose Left or Right. 1/pk. Black.

**Peel, adjust, and re-adhere repeatedly—achieves up to ½” lift**

Clearly Adjustable Heel Lifts include 12 separate layers of firm, clear, and conforming vinyl plastic that can be peeled, adjusted, and re-adhered in ⅛” increments for a ½” maximum lift. Long constant slope supports arch and helps reduce arch stress. Ideal for dress shoes or sandals. Trim with scissors as needed.

### AliMed Product Assurance

**AliMed has a variety of heel lifts, pads, wedges, and evaluation tools to measure and treat leg-length discrepancies, temporary discrepancies when wearing a walking cast or boot, and other conditions, such as pelvic obliquity, plantar fasciitis, and Achilles tendonitis. Choose from a range of materials and thicknesses for an effective solution that best fits your patients’ needs.**

**One lift treats:**

- Leg length
- Pelvic obliquity
- Plantar fasciitis
- Achilles tendonitis

Compensates for leg-length discrepancy when wearing a walking cast or boot

EVENup® Orthotic Shoe Lifts

Add ½” to 1” lift to compensate for a temporary leg-length discrepancy such as when wearing a walking cast or fracture boot. Easily attaches to shoe of nonaffected limb for improved balance and gait, and reduced body strain. Rubber and hook-and-loop straps hold lift in place. Includes adjustable two-layer nonskid rubber outsole. Pro Pack includes five of each size. Fits left or right.

Sizing: S: A sole measurement between 10" and 11½"; Wmns 6-8½, Mens 7-8½. M: A sole measurement between 11½” and 12½”; Wmns and Mens 9-11½. L: A sole measurement between 13” and 14½”; Wmns and Mens 12-14.

It is generally best to choose an EVENup a little too small rather than a little too big. If your shoe measurement is between two measurements such as 11½”-12”, or measures 11½”, it is best to choose the smaller size. Also note: shoe size best correlates with size.

California residents, see below.

Evaluation Tools

Flexible rubber sole

Trial Elevation Sandals

Accommodate up to 1” total leg-length discrepancy. Lightweight flexible rubber sole, leather heel counter, and hook-and-loop ankle and instep straps. ⅛” thick sole with one ⅛” inlay and one ⅛” inlay included.

#62477 $86.75 ea

Color-coded lifts simplify height adjustment

Adjustable Height Shoe Lifts

Are used to measure leg-length discrepancies. Use a variety of thicknesses to obtain correct height. Adjustable hook-and-loop straps secure foot to shoe lifts. Five color-coded foam lifts (⅛”, ⅜”, ⅝”, ⅞”, 1") for easy identification of height. Black ⅛” top and ⅛” bottom sole. 7-piece set.
