

## Increase Patient Independence

■ **Red dinnerware increases food intake for better nutrition<sup>1</sup>**

■ **Durable, dishwasher- and microwave-safe, with nonslip bottom**

■ **Translucent lids keep food at ideal serving temperature**

### AliMed Dining Aids

Assistive **Dining Aids** help improve patient comfort and independence by reducing the challenges of eating and increasing meal intake and nutritional health. Inner-lip plates help slide food onto utensils, high-sided dishes help prevent food from spilling, and compartmentalized plates keep foods separated.

Red dinnerware styles provide a high-contrast background to food, making it easier for patients with declining vision to see what's on the plate and is less likely to show stains.

Studies show that patients with dementia and Alzheimer's disease are likely to increase food intake when it is served on brightly colored plates.<sup>1</sup>

AliMed Dining Aids are durable, attractive, and safe for the freezer, microwave, and dishwasher. Translucent lids provide temperature control and quick identification of contents. Nonslip bottoms reduce food spills that can cause slips.
