

Respiratory muscle trainer strengthens inhalation and exhalation

■ Improves breath support in speech and respiratory training

■ Enhanced dual-resistance settings for inhalation and exhalation

The Breather

Respiratory muscles, like other muscles, can weaken from prolonged illness, aging, and neuromuscular diseases. The Breather effectively uses Resistive Breathing Training (RBT) to rebuild strength in both inspiratory and expiratory muscles of the neck and throat.

The Breather teaches diaphragmatic breathing to improve breath support, producing positive results in clients' cough effort, speech training, and swallow safety.

This unique, ergonomic handheld tool provides separate settings to strengthen both inhalation and exhalation. It can be used with metered-dose inhalers, nebulizers, and breathing or speaking valves.

Product dimensions: 1½"W x 5½"L x 1¾"H
